

- Cartridges are test-printed before shipment.
- Cartridges are reused for their original intended purpose if possible. If not, the metals are stripped from the cartridge and recycled.
- The high petroleum content plastic housings are repaired and refurbished whenever possible. Non repairable cartridges are sent to Systech, a division of Lafarge Concrete, in Sugar Creek MO, where they are ground down and used instead of natural fossil fuels in the production of cement.
- Unusable components are placed into a best-practices recycling stream.
- Nothing is thrown away. Please contact us for a transparent list of our waste stream partners.
- grēnk™ boxes are made from the highest available content of 100% recycled material, of which 50-80% is post-consumer waste.
- Storage clips are returned for reuse or recycling.
- Blades, gears, and OPC drums are reconditioned and reused whenever possible.
